Autodesk® AutoCAD® is the flagship product in the AutoCAD™ family of design solutions. AutoCAD is an industry-leading, enterprise-level, desktop-based, 2D and 3D modeling software. It is used to create, modify, and visualize design data. It helps designers create and modify 3D models, 2D drawings, and technical drawings. It is the most widely used 2D drafting application in the world. With AutoCAD, users can produce 2D drawings that are used to communicate ideas, design solutions, and prepare budgets for their projects. AutoCAD software is also used to create 3D models that are used to visualize, simulate, and analyze engineering and technical designs and engineering problems. AutoCAD is the premier solution for a wide range of industries, including architecture, civil, electrical, mechanical, and structural engineering, facilities management, industrial design, and manufacturing. In 2018, it was estimated that over 4,000,000 licenses of AutoCAD were in use worldwide. [1] Disclaimer: We believe the data and content provided by Autodesk is accurate and reliable. Structure Every add-on is composed of three parts: The library's source code, which consists of a set of libraries and the core application code. The code consists of 4 different layers. Application core code which contains logic of the add-on; Application configuration code, which sets configuration of the add-on to the database and supports installation, uninstallation and management of the add-on; Application installer which consists of the graphical user interface for add-on management; and Application configuration that allows to change the application configuration files of the add-on. Examples The ObjectARX is used by Autodesk for defining application automation scripts and supporting the development and deployment of such scripts. ObjectARX is usually used for the creation of add-on scripts. Its architecture makes ObjectARX to be the framework for development of various tools. Several applications are based on ObjectARX, most notably ArcGIS, Autodesk ReCap, Autodesk Insight, Geomatic, Map3D, Dynamo, Epicor, Embarcadero ArcObjects Framework, Enterprise Architect, Enterprise Guide, PMS, PTC Creo, ArcIMS, and ArcInfo. ObjectARX has been ported to the following programming languages: Microsoft Excel, Microsoft Visual Basic, Microsoft Visual C++

Category:CAD softwareQ: How to get nested key, value in javascript I have a JSON that looks like this:
`{ "Cars": { "BMW": { "1.1": { "Color": "Red" } }, "Benz": { "1.1.1": { a1d647c40b`

Open Autocad and select the key you just generated. On the first key there is a button called "download key". Press it. Save the key. Now you can use the public key in your code. //hier kommen die verschlüsselten Daten

```
var gzdaten = HttpUtility.UrlDecode(Encoding.ASCII.GetBytes(strKopfDaten));
