This is achieved by implementing motion-based physical animation systems that allow players to physically react to the ball, change their body shape and posture and effectively bring their athleticism to life. Official trailer Features New Off-ball Intelligence Off-ball intelligence allows players to understand the opposition's intended movements off the ball and helps create an athletic advantage. A new animated off-ball intelligence can be unlocked in-game. Realistic Ball Trajectories Ball movement has been altered to provide a more natural feeling of player control. This has resulted in new trajectory variations based on match conditions, and a ball that appears to change direction faster when in the air. Tackle Dealing With the Edge Players can deal with the edge of the turf using 'Long Touch' and 'Hawk-Eye' Vision. Hawk-Eye Vision automatically detects the edge of the pitch and helps to increase tactical awareness of players who cross the touchline. With Long Touch, players can perform a 'long touch' with the ball, which will help defend against airborne attacks, and be aware of movement on the pitch, combined with the new Off-ball Intelligence that helps to create an athletic advantage. Improved Long Pass Physics Long passes can now be more accurately controlled and more realistic. The ability to jump has also been added to passes, creating more dynamic and evasive play. Quick Free Kicks Increased player anticipation adds to the atmosphere of the free kick. Players can now run towards the ball from longer distances, and more effectively perform short and long-range shots and powerful kicks. Better Bounce & Throw-ins The Ball has been made more difficult to control off the bounce and players are able to throw the ball into the air with more accuracy and power. New Running Style, Pass, Tackling, and Sprinting Templates The way players run, pass, tackle and sprint has been changed to make them more realistic. Players now move with more body rotation and put more weight into their steps, making them more explosive and vital to attacking teams. Counterpressing System This new system draws an opponent's pressure forward and ensures the team is more proactive. This includes greater use of the ball screen, deeper zoning, quicker closing in from tight spaces, and more reliable off the ball. FIFA Soccer SE, Split
