Build file with odroid-c1 toolchain tar -xvzf odroid-c1-file.tgz A: SBK comes preinstalled on the RPi so you'll be able to access it that way without a disc. The video card that comes with the RPi is NVidia GT540M, which doesn't have vesa/fbdev driver support. You need to use the drm module in SDL to use the built-in VGA display, see this tutorial. I couldn't find any good documentation on SDL for the Pi so here is the link I used to get it to work: Make sure you replace the in the url where "2" is with the correct version.
